LEASEHIVE HELP LIBRARY

CRM Module Help

Entity guide, main data points and end-to-end record flow

Use this guide to understand what each CRM and origination record holds, when it is created, and where its information is used next.

Scope. This help reference covers the CRM and origination entities implemented in LeaseHive: lead capture, opportunity qualification, lease requirements, credit review, approvals, quoting, acceptance and the handoff into the next module. Billing credit notes are outside this flow and are not included.

01 Capture	02 Qualify	03 Assess	04 Decide	05 Price	06 Accept	07 Hand off
Lead source, status, lead and activity	Opportunity and requirement	Credit application and risk evidence	Approval, decision, limit and conditions	Quote, assets, charges, discounts and tax	Customer decision and acceptance record	Validated transfer to the next module

HOW TO READ THIS GUIDE

Data point	What it captures / why it matters
Data-flow order	Entities are arranged in the order they normally become available. Configuration records appear directly before the business records that use them.
Main data points	The guide highlights fields a business user needs to understand; it does not reproduce technical audit fields in every section.
Shared record controls	Most records carry TenantId, internal Id, Created/Modified audit details and RowVersion. These identify the tenant, provide traceability and protect against conflicting updates.
Effective dating	Where shown, EffectiveFrom and EffectiveTo define when a record can be used. A blank EffectiveTo means the record remains open-ended and current.

ENTITY MAP

The next pages follow the working sequence below. Child records are described after the parent record they support.

Phase	Flow	Entity order
1	Lead capture	Lead Source → Lead Status → Lead → Lead Activity
2	Qualification	Opportunity Stage → Opportunity → Lease Requirement → Requirement Asset
3	Credit review	Credit Status → Application → Applicants → Documents / Bureau / Assessment evidence
4	Credit decision	Approval Authority → Approval Request → Approval Action → Decision → Conditions / Limit
5	Pricing & quote	Quote Status → Quote → Snapshot / Asset → Charge / Discount / Tax
6	Acceptance & handoff	Quote Acceptance → Origination Handoff

CRM Data Flow

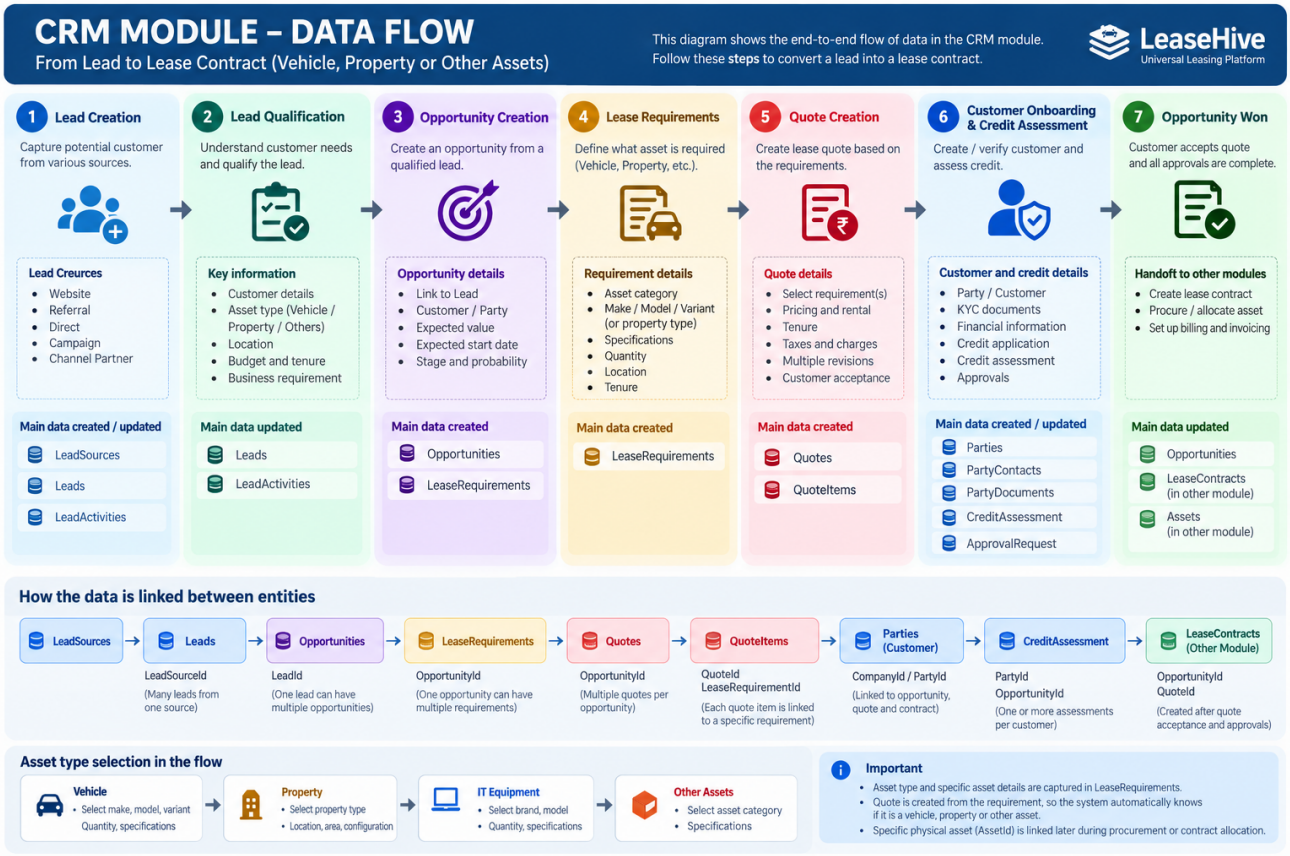

Figure 1. CRM data flow from lead creation to lease contract

DATA-FLOW PHASE

1. Capture and qualify the prospect

Start by configuring how inbound interest is classified, then capture the prospect and the work performed to qualify it.

01. Lead Source

Purpose Configuration record for where an enquiry came from, such as a referral, campaign, dealer or digital channel.

Data point	What it captures / why it matters
SourceCode / SourceName	The short code and readable label presented to users and reports.
IsDigital	Marks sources that originated through a digital channel.
SortOrder	Controls the business display order.
RecordStatus / Effective dates	Controls whether the source is available now and during which period.

Flows next to Lead | Related records TenantId

02. Lead Status

Purpose Configuration record that defines the lifecycle state of a lead.

Data point	What it captures / why it matters
StatusCode / StatusName	The code used by the process and the label shown to users.
IsQualified	Identifies statuses that permit or represent lead qualification.
IsTerminal	Identifies an end state, such as closed or disqualified.
SortOrder / Effective dates	Controls order and the period in which a status can be selected.

Flows next to Lead | Related records TenantId, RecordStatus

03. Lead

Purpose The first business record for a prospective customer or enquiry. It captures contact context, interest and the outcome of qualification.

Data point	What it captures / why it matters
LeadId	Business identifier for tracking the enquiry.
LeadSourceId / LeadStatusId	Links the lead to its source and current lifecycle state.
ProspectName / ContactName	The prospective organisation or person and the main contact.
Email / Phone / CountryCode	Contact channels and location context.
InterestedAssetCategoryId	The asset category the prospect is interested in.
EstimatedValue / CurrencyCode / ExpectedCloseDate	Early commercial estimate and expected timing.
QualifiedPartyId / QualifiedOn	Links the converted customer party and records when qualification occurred.
DisqualificationReason	Why the enquiry was not progressed, where applicable.

Flows next to Opportunity after qualification | Related records Lead Activity; owner, originating organisation and effective-date controls

04. Lead Activity

Purpose A dated interaction, task or follow-up used to evidence the work performed on a lead or opportunity.

Data point	What it captures / why it matters
LeadId / OpportunityId	Links the activity to the earlier lead or to the opportunity once it exists.
ActivityType / Subject	Classifies the action and states its purpose.
ActivityDateTime / DueDateTime	Records when the activity happened and when a follow-up is due.
AssignedUserId	The user accountable for completing the action.
OutcomeCode / Notes / CompletedOn	Records the result, supporting narrative and completion date.

Flows next to Opportunity or next follow-up | Related records Lead, Opportunity

DATA-FLOW PHASE

2. Build the commercial opportunity

A qualified prospect becomes an opportunity. The opportunity is then turned into a lease requirement and one or more asset lines.

05. Opportunity Stage

Purpose Configuration record for pipeline stages and their default likelihood of success.

Data point	What it captures / why it matters
StageCode / StageName	The process code and user-facing pipeline label.
DefaultProbabilityPct	Suggested probability for opportunities at this stage.
IsWon / IsLost	Marks stages that end the sales cycle as won or lost.
SortOrder / Effective dates	Controls pipeline order and availability.

Flows next to Opportunity | Related records TenantId, RecordStatus

06. Opportunity

Purpose The commercial sales record created for a qualified party and managed through the pipeline.

Data point	What it captures / why it matters
OpportunityId / OpportunityName	Business identifier and description of the sales pursuit.
LeadId / PartyId	Links to the originating lead and the qualified customer party.
OpportunityStageId	Current pipeline stage.
EstimatedAmount / CurrencyCode / ProbabilityPct	Commercial value and likelihood used for pipeline visibility.
ExpectedCloseDate / ClosedOn	Forecast closing date and actual closure timestamp.
LostReasonCode	Reason retained when the opportunity is lost.
Owner and organisation fields	Identify the user, organisational unit and originating organisation accountable for the pursuit.

Flows next to Lease Requirement and Credit Application | Related records Lead Activity, Lead

07. Lease Requirement

Purpose The customer’s leasing need: party, timing, term and overall requirement context used as the basis for pricing.

Data point	What it captures / why it matters
LeaseRequirementId	Business identifier for the requirement.
OpportunityId / PartyId / PartyLocationId	Links the requirement to the pursuit, customer and relevant location.
RequirementDate / PreferredStartDate	When the requirement was raised and the desired lease start.
RequestedTermMonths / CurrencyCode	Requested length and commercial currency.
RequirementStatusCode	Business state of the requirement.
CustomerReference / Remarks	Customer’s reference and free-form requirement notes.

Flows next to Lease Requirement Asset and Quote | Related records Opportunity

08. Lease Requirement Asset

Purpose A line item describing each asset or asset type requested within a lease requirement.

Data point	What it captures / why it matters
LeaseRequirementId / LineNo	Parent requirement and ordered line number.
Asset category / type / make / model	The asset specification selected for the line.
Quantity / NewUsedCode	How many assets are needed and their new/used preference.
EstimatedUnitCost / CurrencyCode	Estimated cost basis for pricing.
ExpectedAnnualUsage / UsageUOMId	Usage assumptions and unit of measure.
ServicePackageCode / SpecificationsJson / Remarks	Service requirement, detailed technical specification and supporting notes.

Flows next to Quote Asset | Related records Lease Requirement

DATA-FLOW PHASE

3. Capture and assess credit risk

A credit application is raised for the party and opportunity. Applicants, documents, bureau findings and assessment evidence support the decision.

09. Credit Application Status

Purpose Configuration record that defines the current state of a credit application.

Data point	What it captures / why it matters
StatusCode / StatusName	The process code and name shown in the credit workflow.
IsTerminal	Marks final application states.
SortOrder / Effective dates	Controls display order and when the status can be used.
RecordStatus	Controls whether the configuration record is active.

Flows next to Credit Application | Related records TenantId

10. Credit Application

Purpose The formal request to assess a party's creditworthiness for the related opportunity and requested facility.

Data point	What it captures / why it matters
CreditApplicationId	Business identifier for the application.
OpportunityId / PartyId	Links the application to the commercial pursuit and applicant party.
CreditApplicationStatusId	Current state of the credit case.
ApplicationDate / SubmittedOn / DecisionOn	Lifecycle dates for creation, submission and outcome.
RequestedLimitAmount / CurrencyCode / RequestedTermMonths	Requested exposure and facility term.
RiskSegmentCode	Risk classification used to route or assess the application.
AssignedAnalystUserId	Credit analyst responsible for the review.

Flows next to Applicants, documents, bureau checks and assessment | Related records Opportunity, Credit Applicant Party, Credit Document Checklist

11. Credit Applicant Party

Purpose Identifies every party involved in an application, including the main applicant and guarantors.

Data point	What it captures / why it matters
CreditApplicationId / PartyId	Links the participant to the application and party master.
CreditPartyRoleId	Defines the party's role in the application.
IsPrimary	Identifies the principal applicant.
GuaranteeAmount / CurrencyCode	Amount and currency of a committed guarantee, when applicable.

Flows next to Bureau result and assessment | Related records Credit Application

12. Credit Document Checklist

Purpose Tracks the documentary evidence required to make a credit decision and whether it has been verified.

Data point	What it captures / why it matters
CreditApplicationId	The application the document requirement belongs to.
DocumentType / IsRequired	Required evidence type and whether it is mandatory.
DocumentId	Link to the submitted document record.
ChecklistStatus	Current evidence state, such as pending or complete.
VerifiedBy / VerifiedOn	Who verified the evidence and when.

Flows next to Credit Assessment and Credit Decision | Related records Credit Application

13. Credit Bureau Result

Purpose Stores the response from a bureau or third-party credit information provider for an applicant party.

Data point	What it captures / why it matters
CreditApplicationId / PartyId	Application and party that were checked.
ProviderCode / RequestReference	External provider and the traceable request reference.
RequestedOn / ReceivedOn	Timing of the bureau request and response.
Score / RiskBand / AdverseFlag	Provider findings that influence the risk view.
RawDocumentId / ResultStatusCode	Link to source evidence and processing state of the result.

Flows next to Credit Assessment | Related records Credit Application, Credit Applicant Party

14. Credit Assessment

Purpose The analyst's versioned assessment of risk for a credit application. It becomes the parent for financial and exposure evidence and feeds the decision.

Data point	What it captures / why it matters
CreditApplicationId / AssessmentVersion	The application assessed and the version of that assessment.
AssessmentTypeCode / AssessmentDateTime	Type and timestamp of the review.
AssessedByUserId	Analyst responsible for the assessment.
RiskRatingCode / Score / ProbabilityOfDefaultPct	Core risk result, score and estimated default probability.
RecommendedLimitAmount / CurrencyCode	Recommended exposure amount and currency.

Flows next to Credit Financial Snapshot, Credit Exposure and Credit Decision | Related records Credit Application, Credit Bureau Result

15. Credit Financial Snapshot

Purpose A structured financial-period snapshot used as assessment evidence for the applicant's capacity and leverage.

Data point	What it captures / why it matters
CreditAssessmentId / FinancialPeriodEnd	Assessment linkage and financial period-end key.
CurrencyId	Currency identifier used for the reported figures.
Revenue / EBITDA / NetProfit	Trading performance for the reported period.
NetWorth / TotalDebt	Capital base and indebtedness.
CurrentRatio / DebtEquityRatio / DSCR	Liquidity, leverage and debt-service capacity metrics.
SourceDocumentId	Reference to the underlying financial evidence.

Flows next to Credit Decision | Related records Credit Assessment

16. Credit Exposure

Purpose The exposure position considered during a credit assessment, including existing and proposed commitments.

Data point	What it captures / why it matters
CreditAssessmentId / PartyId / OrganisationId	Links the exposure to the assessment, counterparty and lending organisation.
ExposureType / CurrencyCode	Classifies the exposure and its currency.
PrincipalOutstanding / UndrawnCommitment	Current funded balance and unused committed amount.
ProposedExposure / TotalExposure	New exposure under consideration and the aggregate result.
AsOfDate	Date at which the position was measured.

Flows next to Credit Decision | Related records Credit Assessment

DATA-FLOW PHASE

4. Route approval and record the credit decision

The authority configuration determines who can approve. A request and its actions evidence the decision; resulting conditions and limits control what happens next.

17. Approval Authority

Purpose Effective-dated configuration for who is authorised to approve a process and for what monetary range.

Data point	What it captures / why it matters
ProcessCode / ApprovalLevel	Workflow process and escalation level governed by the authority.
AuthorityType	How authority is assigned, for example by role, user or organisational unit.
RoleId / ApplicationUserId / OrganisationUnitId	The permitted approver or approver group.
MinimumAmount / MaximumAmount	Financial range covered by the authority.
RequiredApproverCount / CanDelegate	Approval quorum and delegation allowance.
RecordStatus / Effective dates	Whether and when this authority can be used.

Flows next to Approval Request | Related records TenantId

18. Approval Request

Purpose A workflow request raised when a credit decision, quote discount or other controlled action requires approval.

Data point	What it captures / why it matters
FeatureCode / ReferenceType / ReferenceId	Identifies the business feature and the specific record needing approval.
WorkflowDefinitionId	The workflow used to route the request.
RequestedBy / RequestedOn	Requester and timestamp.
RequestedAmount / CurrencyId	Amount presented for approval and its currency.
ApprovalStatus / CompletedOn	Current approval state and when it finished.

Flows next to Approval Action and Credit Decision / Quote Discount | Related records Approval Authority

19. Approval Action

Purpose One approver’s recorded step in an approval request.

Data point	What it captures / why it matters
ApprovalRequestId / StepNo	Parent request and sequence within its workflow.
ApproverUserId	User responsible for this step.
ActionCode / ActionDateTime	The action taken, such as approve or reject, and when.
Comments	Approver rationale or instructions.
DelegatedFromUserId	Original approver where authority was delegated.

Flows next to Credit Decision or discounted quote | Related records Approval Request

20. Credit Decision

Purpose The formal approve, decline or refer outcome for a credit application, founded on a credit assessment and, where required, an approval request.

Data point	What it captures / why it matters
CreditApplicationId / CreditAssessmentId	Links the outcome to the case and assessment underpinning it.
DecisionCode / DecisionDateTime	Formal outcome and timestamp.
ApprovedLimitAmount / CurrencyCode / ApprovedTermMonths	Approved facility size, currency and tenor.
RiskRatingCode	Risk grade applied to the decision.
DecisionReasonCode / DecisionSummary	Structured reason and narrative decision explanation.
ValidUntil	Expiry date after which the decision should no longer be relied on.
ApprovalRequestId / DecidedBy	Approval evidence and final decision-maker.

Flows next to Credit Condition, Credit Limit and Quote | Related records Credit Application, Credit Assessment, Approval Request

21. Credit Condition

Purpose A condition attached to a credit decision that must be tracked and, when relevant, satisfied before the transaction progresses.

Data point	What it captures / why it matters
CreditDecisionId	Decision the condition belongs to.
ConditionType / ConditionText	Classification and plain-language requirement.
IsPrecedent	Marks a condition that must be met before a subsequent event.
DueDate / ConditionStatus / SatisfiedOn	Due date, current state and completion date.
EvidenceDocumentId / VerifiedBy	Supporting evidence and the user who validated it.

Flows next to Origination Handoff when conditions are satisfied | Related records Credit Decision

22. Credit Limit

Purpose The effective-dated credit facility made available to a party following an approved credit decision.

Data point	What it captures / why it matters
PartyId / OrganisationId / CreditDecisionId	Counterparty, issuing organisation and source decision.
CurrencyCode / LimitAmount	Facility currency and authorised amount.
EffectiveFrom / EffectiveTo	Period during which the limit is available; a blank end date is open-ended.
LimitStatus / RecordStatus	Operational availability of the facility record.
Remarks	Supporting notes or constraints.

Flows next to Quote validation and Origination Handoff | Related records Credit Decision

DATA-FLOW PHASE

5. Price, approve and issue the quote

Use the requirement and the approved credit position to create a versioned commercial offer. Quote child records hold the customer snapshot, assets and calculated additions.

23. Quote Status

Purpose Configuration record that controls the state of a quote and whether users may continue to edit it.

Data point	What it captures / why it matters
StatusCode / StatusName	The process code and label shown on a quote.
IsEditable	Determines whether the quote can be changed in this status.
IsTerminal	Marks an end state such as accepted, declined or expired.
SortOrder / Effective dates	Controls display sequence and available period.
RecordStatus	Controls whether the status configuration itself is active.

Flows next to Quote | Related records TenantId

24. Quote

Purpose The versioned commercial offer made to the customer for the opportunity and lease requirement.

Data point	What it captures / why it matters
QuoteId / QuoteGroupNo / VersionNo	Business identifier, version family and version number.
OpportunityId / LeaseRequirementId / PartyId	Links the offer to the pursuit, requirement and customer.
QuoteStatusId	Current quote state.
QuoteDate / ValidUntil	Offer date and expiry date.
CurrencyCode / RequestedTermMonths / BillingFrequency	Core pricing currency, term and billing cadence.
Subtotal / Tax / Total / SecurityDeposit	Headline financial amounts presented in the offer.
PricingDateTime / IssuedOn / AcceptedOn	Pricing, issue and acceptance milestones.
SupersedesQuoteId / Remarks	Version lineage and business notes.

Flows next to Quote Party Snapshot, Quote Asset, Quote Charge, Quote Discount, Quote Tax and Quote Acceptance | Related records Opportunity, Lease Requirement, Quote Status

25. Quote Party Snapshot

Purpose A point-in-time copy of the customer details used on the quote, preserving what was presented even if the party master later changes.

Data point	What it captures / why it matters
QuoteId / PartyId	Links the snapshot to the quote and source customer party.
LegalName / TaxRegistrationNo	Customer identity and tax registration as shown on the offer.
BillingAddress	Address used for commercial and billing presentation.
ContactName / ContactEmail / ContactPhone	Quoted contact details.
SnapshotOn / CurrencyCode	When the snapshot was taken and related currency context.

Flows next to Quote issuance and acceptance | Related records Quote

26. Quote Asset

Purpose Priced asset line on a quote, normally derived from a lease requirement asset and containing the rental calculation inputs and result.

Data point	What it captures / why it matters
QuoteId / LeaseRequirementAssetId / LineNo	Parent quote, originating requirement line and ordering.
Asset category / type / make / model / Description	Asset specification offered to the customer.
Quantity / UnitAssetCost	Quantity and asset cost basis.
ResidualValuePct / ResidualValueAmount	Expected end-of-term value assumptions.
TermMonths / RateFactor / PeriodicRentalAmount	Primary pricing inputs and recurring rental outcome.
BillingFrequency / TaxCode / LineSubtotal	Billing cadence, tax treatment and total for the line.

Flows next to Quote Charge, Quote Discount and Quote Tax | Related records Quote, Lease Requirement Asset

27. Quote Charge

Purpose An additional quote-level or asset-level charge, whether one-time or recurring.

Data point	What it captures / why it matters
QuoteId / QuoteAssetId	Links the charge to the quote and optionally its asset line.
ChargeType / ChargeDescription	Classification and explanation of the charge.
CalculationTypeCode / RateOrAmount	How the charge is calculated and the input rate or amount.
ChargeAmount / IsRecurring	Calculated result and whether it repeats.
TaxCode	Tax treatment applied to the charge.

Flows next to Quote Tax and quote totals | Related records Quote, Quote Asset

28. Quote Discount

Purpose A concession applied to a quote or a particular quote asset; it can carry its own approval evidence.

Data point	What it captures / why it matters
QuoteId / QuoteAssetId	Links the discount to the quote and optionally a line.
DiscountTypeCode / DiscountValue / DiscountAmount	Discount method, input value and calculated monetary reduction.
ReasonCode	Business justification for the concession.
ApprovalRequestId / ApprovedBy / ApprovedOn	Workflow evidence and approval completion details.

Flows next to Quote Tax and final quote approval | Related records Quote, Quote Asset, Approval Request

29. Quote Tax

Purpose Tax calculation captured against a quote, asset line or charge so the quoted totals are traceable.

Data point	What it captures / why it matters
QuoteId / QuoteAssetId / QuoteChargeId	Parent quote and optional line or charge to which tax applies.
TaxType / TaxRate	Type of tax and rate used for the calculation.
TaxableAmount / TaxAmount	Base amount and calculated tax contribution.
JurisdictionId	Jurisdiction indicator recorded by the current quote-tax entity.
TaxRegistrationSnapshot	Tax registration information retained with the calculation.

Flows next to Quote totals and customer acceptance | Related records Quote, Quote Asset, Quote Charge

DATA-FLOW PHASE

6. Confirm customer acceptance and hand off

After the customer responds to the issued quote, record that decision and transfer the validated opportunity into the next operational module.

30. Quote Acceptance

Purpose The customer's explicit acceptance, decline or other decision on an issued quote.

Data point	What it captures / why it matters
QuoteId	Quote to which the customer decision applies.
DecisionCode / DecisionDateTime	Decision outcome and when it was made.
AcceptedByName / AcceptedByPartyContactId	Person accepting and the linked party contact, where available.
AcceptanceMethodCode	Channel used, such as signed document or electronic acceptance.
DocumentId	Evidence document associated with the acceptance.
Remarks	Additional context about the decision.

Flows next to Origination Handoff | Related records Quote

31. Origination Handoff

Purpose The controlled transfer of an accepted and validated commercial case to the target module for contract creation or downstream processing.

Data point	What it captures / why it matters
OriginationHandoffId	Business identifier for the transfer event.
OpportunityId / QuoteId / CreditDecisionId / PartyId	Source commercial, quote, credit and customer references included in the handoff.
HandoffStatusId / HandoffDateTime	Transfer state and timing.
TargetModuleCode / TargetReferenceId	Destination module and the record created or updated there.
ValidationJson	Structured validation output retained with the handoff for traceability and troubleshooting.

Flows next to Contract creation or target-module processing | Related records Quote Acceptance, Credit Decision, Credit Conditions

PRACTICAL GUIDANCE

Working with the CRM flow

Data point	What it captures / why it matters
Configure first	Keep statuses, stages, sources and approval authorities current before users create business records; these configuration entities control the choices and workflow behaviour seen later in the flow.
Protect the record lineage	Use the linking fields—LeadId, OpportunityId, LeaseRequirementId, CreditApplicationId, QuoteId and CreditDecisionId—to keep the case traceable from initial contact through handoff.
Treat snapshots as historical evidence	Quote Party Snapshot and Tax Registration Snapshot preserve exactly what was used for the offer. Do not expect later master-data changes to rewrite these historical records.
Complete checks before handoff	An accepted quote alone is not the whole case. Confirm the required credit decision, active credit limit and precedent credit conditions before progressing to the target module.

This guide is intended as a help reference for CRM and origination users. Field availability in a screen may be affected by permissions, tenant configuration and the current record status.
