Billing & Finance Module Help

Billing generation, receivables, collections, accounting and reconciliation flow

WHAT THIS GUIDE COVERS

Use this guide to understand how approved lease obligations become billing candidates, invoices, receivables, payments, accounting entries and reconciled bank activity.

MODULE FLOW AT A GLANCE

Prepare → Generate → Issue → Collect → Allocate → Post → Reconcile

HOW TO READ THIS GUIDE

Data flow image	Shows the controlled sequence and the records that move the work forward.
Entity map	Names the primary records and the role each record plays in the module.
Record guide	Explains the data each stage needs and the decision it makes possible.
Practical guidance	Highlights operational controls and the most important handoffs.

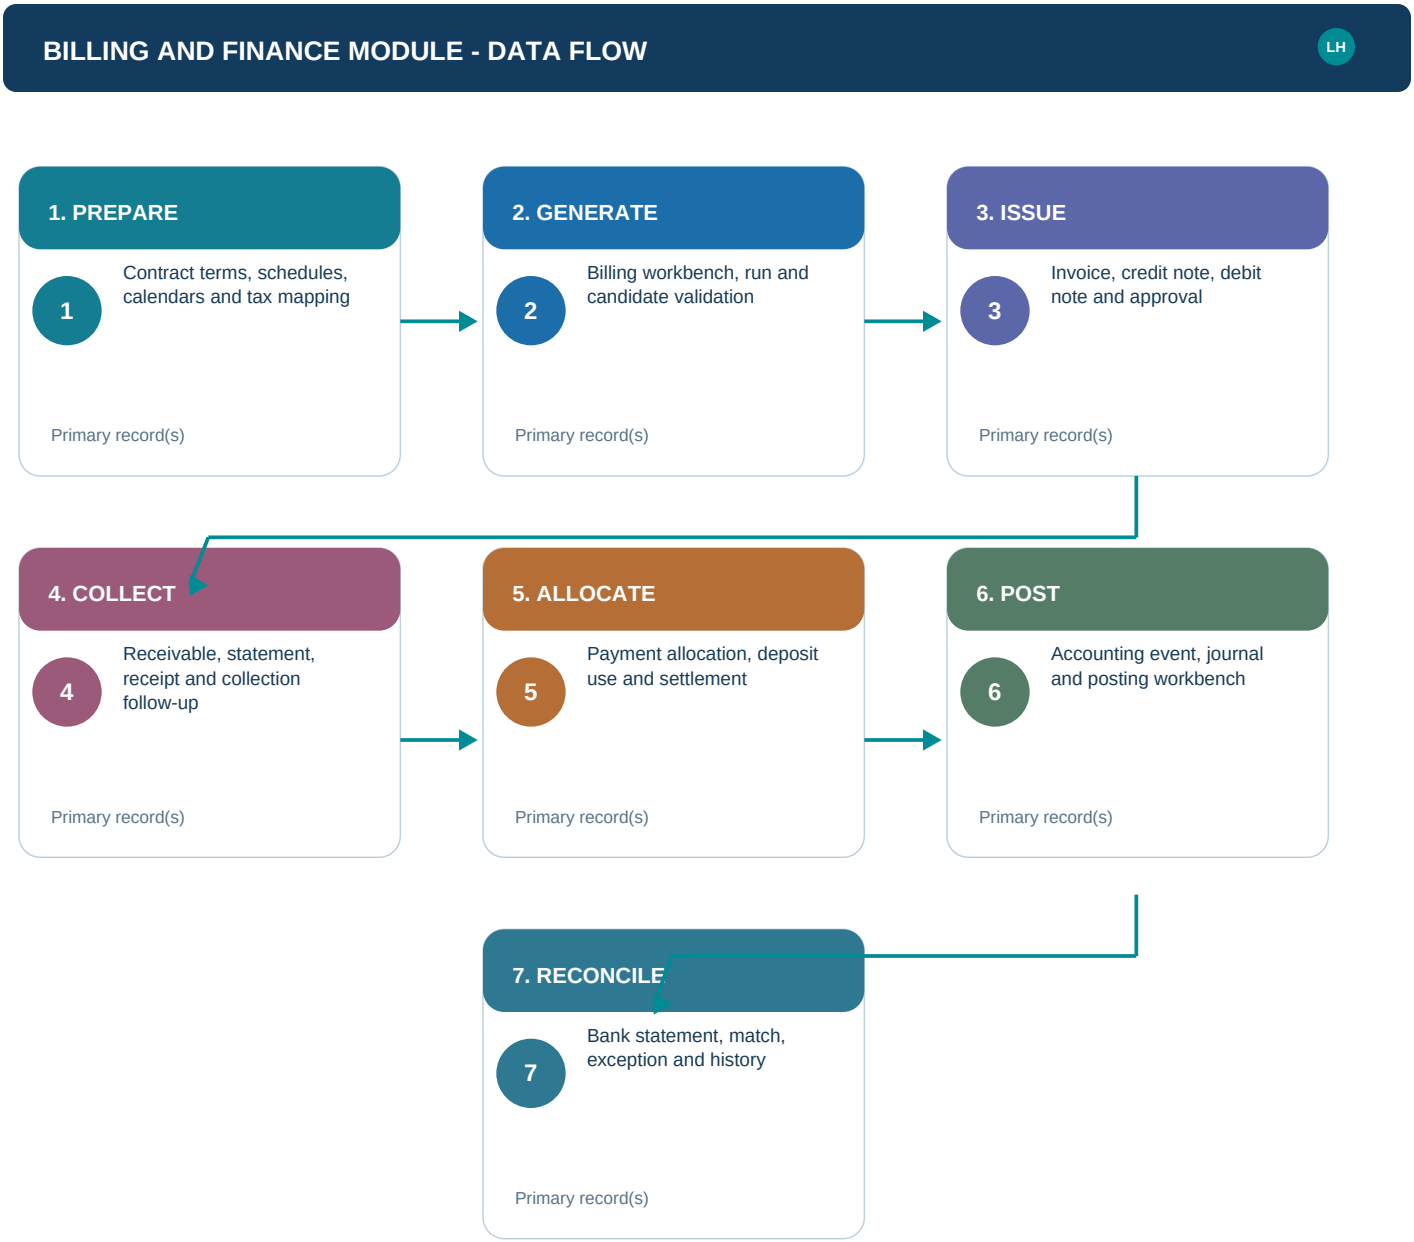
ENTITY MAP

Billing run / candidate	Turns eligible scheduled obligations into controlled billing output.
Invoice / note	Issues the document and its corrective credit or debit adjustments.
Receivable / statement	Tracks the amount due and the customer balance position.
Receipt / allocation	Records cash received and how it settles open balances.
Deposit	Holds, uses, refunds or forfeits contractual security amounts.
Accounting / reconciliation	Posts events to journals and matches cash to bank activity.

The data-flow image on the next page is the quickest way to orient a new user before they work in the module.

Billing and Finance Data Flow

The primary record flow, with its control points and downstream consumers.



DATA EXCHANGE AND CONTROL POINTS

- Each stage should carry a link to the prior controlled record rather than duplicating its key data.
- Approvals, accepted receipts, execution evidence or financial controls determine when the next stage may proceed.
- Status and history records make the current position, accountable user and audit trail visible across modules.

Figure 1. Billing & Finance Module Help data flow - read left to right, then continue on the lower row.

DATA-FLOW PHASES

Record Guide

What each stage records, and the decision or outcome it supports.

1

Billing preparation

PRIMARY RECORDS

Payment schedules, billing calendars, tax and account mapping

OUTCOME

Determines what should be billed and how financial output is classified.

2

Billing generation

PRIMARY RECORDS

Billing workbench, billing run, candidate and exception

OUTCOME

Builds a reviewable set of chargeable obligations.

3

Customer documents

PRIMARY RECORDS

Invoice, credit note, debit note and approval

OUTCOME

Issues the customer-facing documents and controlled adjustments.

4

Receivables and collection

PRIMARY RECORDS

Receivable, customer statement, receipt and collection activity

OUTCOME

Tracks due balances through receipt and allocation.

5

Deposit management

PRIMARY RECORDS

Deposit, utilization, refund and forfeiture

OUTCOME

Applies contractual security money to the right settlement outcome.

6

Accounting and bank

PRIMARY RECORDS

Accounting event, journal, posting, statement and reconciliation

OUTCOME

Produces auditable ledger output and confirms real bank movement.

Use the stage status and linked records together when diagnosing a worklist or handoff issue.

PRACTICAL GUIDANCE

Working with the Billing and Finance flow

Use these checks to keep records auditable, useful to downstream teams and ready for reporting.

THE OPERATING PRINCIPLE

Each workflow stage should create or update its own accountable record, retain the decision evidence, and link forward only when its control condition has been met.

CONTROL CHECKS

1. Resolve billing candidates and exceptions before a run is issued.
2. Allocate receipts against the intended receivable so statements, ageing and settlement remain accurate.
3. Review posting and reconciliation exceptions as control items, not as narrative follow-up.

DOWNSTREAM HANDOFFS

Lease Contracts supplies payable schedules, charges and deposits. End-of-Lease & Disposal supplies settlement, refund and disposal-related financial outcomes. Finance handoffs preserve external integration context.

WHEN A RECORD DOES NOT MOVE FORWARD

- Check the record status and the current owner or worklist.
- Open the linked predecessor record and confirm its approval, receipt, execution or posting condition.
- Review visible exceptions and history before changing data or creating a follow-up record.

This guide is a process reference. Follow your organisation's configured approval, policy and retention requirements.
