# Maintenance & Insurance Module Help

Service planning, work execution, coverage, claims and recovery flow

### WHAT THIS GUIDE COVERS

Use this guide to see how an asset is planned for service, repaired through controlled work orders, and protected by insurance policies through incident, claim, settlement and recovery activity.

## MODULE FLOW AT A GLANCE

Plan → Request → Execute → Complete → Cover → Claim → Recover

## HOW TO READ THIS GUIDE

| | |
|---|---|
| **Data flow image** | Shows the controlled sequence and the records that move the work forward. |
| **Entity map** | Names the primary records and the role each record plays in the module. |
| **Record guide** | Explains the data each stage needs and the decision it makes possible. |
| **Practical guidance** | Highlights operational controls and the most important handoffs. |

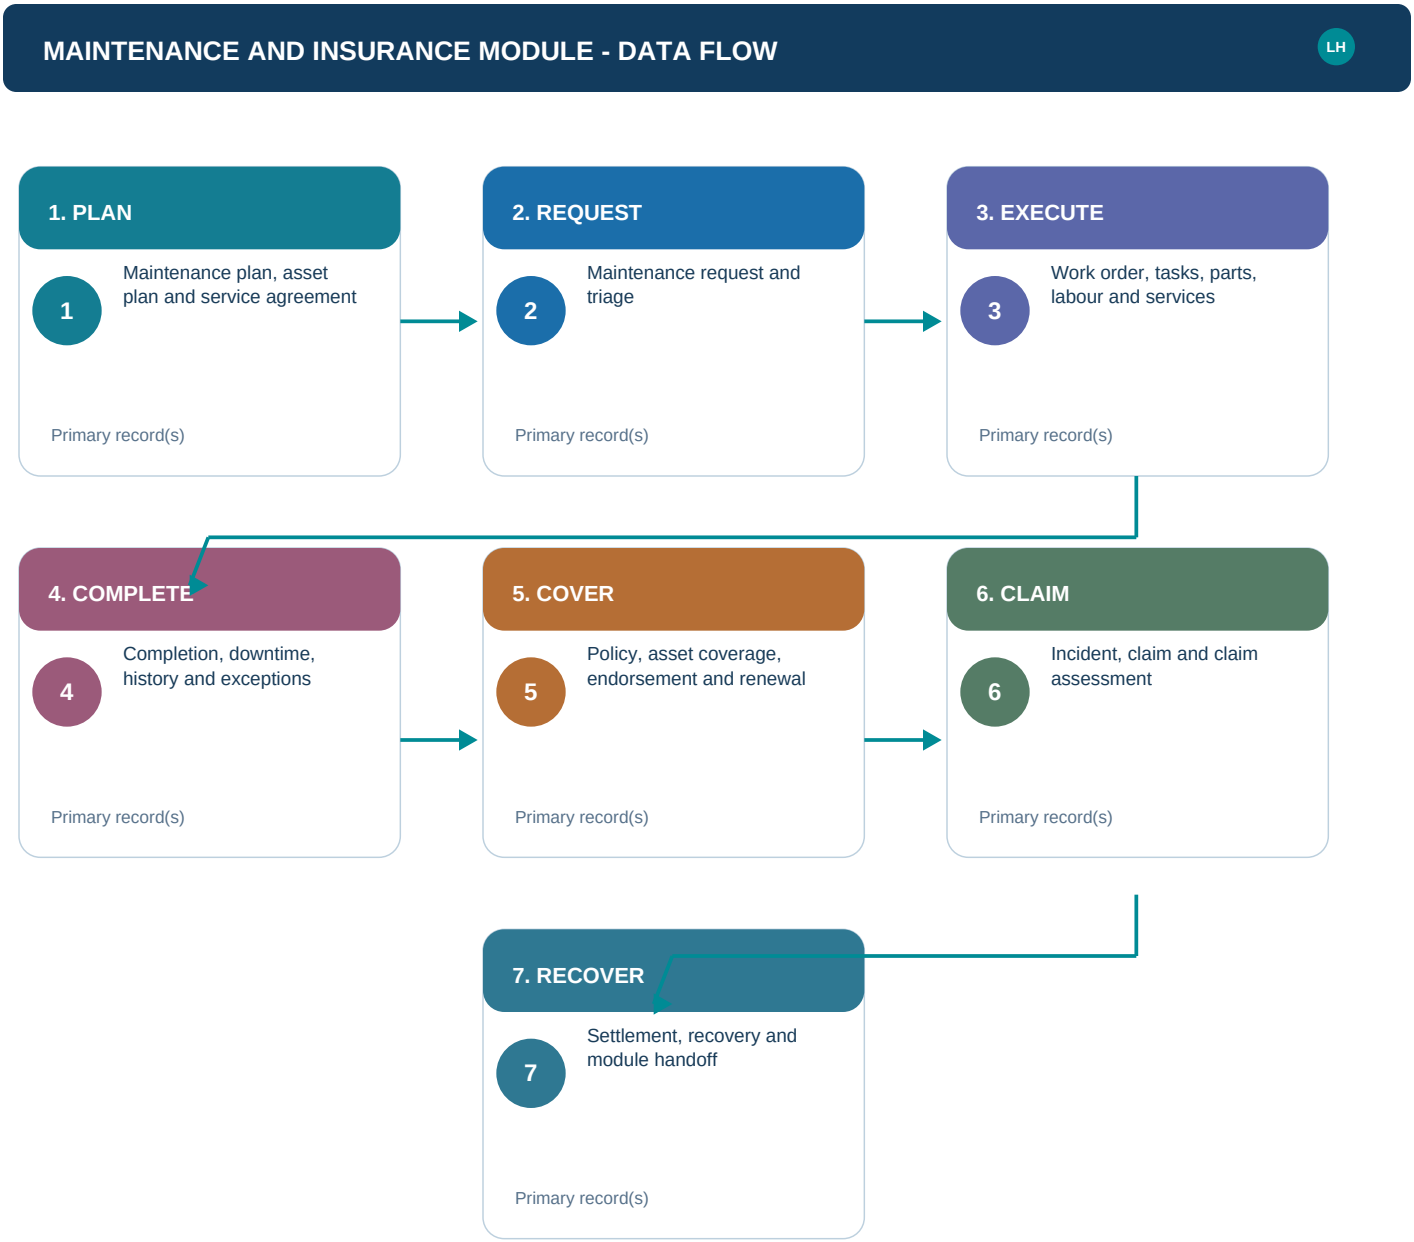
## ENTITY MAP

| | |
|---|---|
| **Maintenance plan / asset plan** | Defines planned service work for a particular asset or class. |
| **Maintenance request** | Captures an operational need before a work order is performed. |
| **Work order** | Coordinates tasks, parts, labour, services and completion evidence. |
| **Downtime / history** | Shows the operational impact and permanent service trail. |
| **Insurance policy / coverage** | Connects policy terms, endorsements and renewals to assets. |
| **Incident / claim / settlement** | Controls loss reporting, assessment, payment and recovery. |

*The data-flow image on the next page is the quickest way to orient a new user before they work in the module.*

# Maintenance and Insurance Data Flow

The primary record flow, with its control points and downstream consumers.



## DATA EXCHANGE AND CONTROL POINTS

- Each stage should carry a link to the prior controlled record rather than duplicating its key data.
- Approvals, accepted receipts, execution evidence or financial controls determine when the next stage may proceed.
- Status and history records make the current position, accountable user and audit trail visible across modules.

*Figure 1. Maintenance & Insurance Module Help data flow - read left to right, then continue on the lower row.*

DATA-FLOW PHASES

# Record Guide

What each stage records, and the decision or outcome it supports.

1

## Service planning

**PRIMARY RECORDS**

Maintenance plan, asset plan, service agreement and coverage

**OUTCOME**

Sets planned work and the supplier or agreement boundaries for the asset.

2

## Service request

**PRIMARY RECORDS**

Maintenance request and work-order creation

**OUTCOME**

Turns a reported need into a planned, traceable service activity.

3

## Work execution

**PRIMARY RECORDS**

Work order, task, part, labour and service lines

**OUTCOME**

Records effort, materials and service work performed.

4

## Completion control

**PRIMARY RECORDS**

Completion, downtime, history and exception

**OUTCOME**

Confirms the result and exposes unresolved operating risk.

5

## Insurance administration

**PRIMARY RECORDS**

Policy, asset coverage, endorsement and renewal

**OUTCOME**

Maintains active protection and accurate cover terms.

6

## Loss and recovery

**PRIMARY RECORDS**

Incident, claim, assessment, settlement and recovery

**OUTCOME**

Records the full financial and operational outcome of an insured event.

*Use the stage status and linked records together when diagnosing a worklist or handoff issue.*

PRACTICAL GUIDANCE

# Working with the Maintenance and Insurance flow

Use these checks to keep records auditable, useful to downstream teams and ready for reporting.

### THE OPERATING PRINCIPLE

Each workflow stage should create or update its own accountable record, retain the decision evidence, and link forward only when its control condition has been met.

## CONTROL CHECKS

1. Attach each service plan and insurance cover to the correct asset identity.
2. Close a work order only after required completion information and asset condition updates are recorded.
3. Treat incidents, claims, settlements and recoveries as linked stages of one loss record.

## DOWNSTREAM HANDOFFS

Asset Management receives current condition, service history and coverage context. Billing & Finance receives settlement or recovery outcomes. End-of-Lease & Disposal consumes service and loss history during assessment.

## WHEN A RECORD DOES NOT MOVE FORWARD

- Check the record status and the current owner or worklist.
- Open the linked predecessor record and confirm its approval, receipt, execution or posting condition.
- Review visible exceptions and history before changing data or creating a follow-up record.

*This guide is a process reference. Follow your organisation's configured approval, policy and retention requirements.*
